

Red Hat OpenShift AI: API Tiers

Updated April 22 2026 at 5:52 PM - English ▾

For Red Hat OpenShift AI, APIs are stable within a major release for a minimum of 9 months from the announcement of deprecation. In addition, the following statements apply:

- APIs may be deprecated and removed within a major release.
- APIs may have a longer deprecation window than the minimum.

All commercially-supported APIs, components, and features are associated under one of the following support levels:

API Tier 1

APIs in Tier 1 are stable within a major release for a minimum of 18 months.

API Tier 2

APIs in Tier 2 are stable within a major release for a minimum of 9 months.

API Tier 4

No compatibility is provided for APIs in Tier 4. A Tier 4 API can change at any point. The capabilities of Tier 4 APIs are not intended for use outside of OpenShift AI components.

API Tier Beta

APIs in Tier Beta are for Technology Preview features. Red Hat provides at least a manual migration path for any breaking changes.

API Tier Alpha

APIs in Tier Alpha are for unsupported Developer Previews. Red Hat does not provide backward compatibility guarantees.

The following table lists the API tier for each OpenShift AI API version example (customer accessible endpoint).
